

GV-CR1320 2MP H.264 IP Camera Reader

Introduction

GV-CR1320 is a 13.56 MHz card reader with a built-in 2 MP camera. GV-CR1320 recognizes identification cards and grants access as regulated by the connected controller. Its camera captures the live view of entrance and transmits it to the access control system GV-ASManager through network connection, without the need of installing and maintaining a separate camera in addition to the card reader.

VoIP Calls:

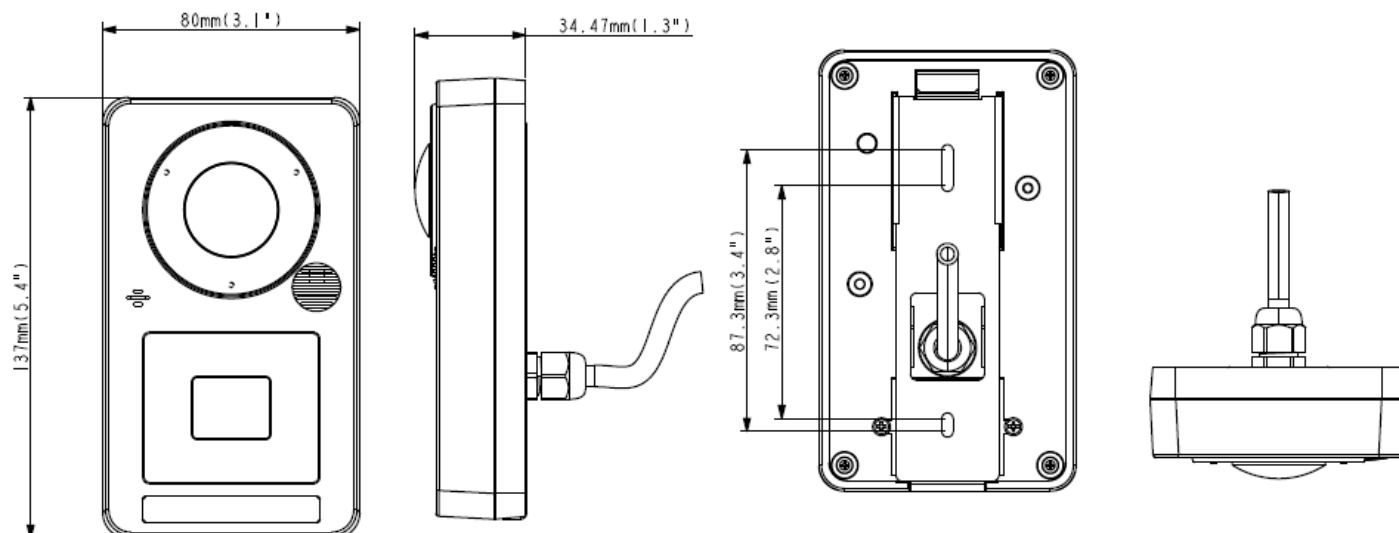

When its touchpad is activated, GV-CR1320 will place a call to the operator through VoIP. The operator can then communicate with the visitor and enter an access code to open the door.

Card Swiping plus Face Detection:

The Card and Face mode enables GV-CR1320 to perform face detection together with card verification before access can be granted.
