

MIC-1

MICROPHONE

The MIC-1 microphone enables the listen-in feature in alarm system based on MICRA alarm module. Convenient connection is possible via the included microphone cable with 3.5 mm mini-jack plug that fits the module microphone connector.

The microphone cable can be either directly surface mounted on the wall or embedded in plaster. Its length is 10 meters, but it can be shortened or coiled in order to better suit the installation needs. Also, because the cable is shielded and the microphone is situated at some distance from the module, the transmitted sound is noise-free and the obtained listening-in quality is better.

- microphone designed for work with the MICRA module
- compact design for easy installation in any location
- dedicated 10 m long microphone cable with 3.5 mm jack plug
